**AIRBUS**

Maritime surveillance is a major concern for governments needing to protect their Exclusive Economic Zone and for private organisations seeking to secure their fleets against potential threats or sources of illegal activities, such as illegal fishing, smuggling or piracy.

Building on its expertise in big data, machine learning and predictive analysis support the maritime industry to increase knowledge, anticipate threats, trigger alerts and suspicious behaviour and improve efficiency at sea.

### Enhance your maritime knowledge

Transform the data into actionable knowledge. All content is acquired, stored, analysed and displayed on a bespoke dashboard in order to extract valuable information for your operations.

### Keep full control of your operations

'Do-it-yourself' thanks to a white label system and source training. Define and implement your own strategy from photointerpretation to action and operations.

### Maximise your expertise

Thanks to dedicated tools, you will be able to automatically process huge amounts of data from available sources. Support your analysts and allow them to focus on high value tasks.

## Airbus is making the oceans more visible and therefore safer for everyone by:

- Increasing knowledge;
- Anticipating threats;
- Triggering alerts;
- Monitoring for suspicious behaviour;
- Helping to improve efficiency at sea.

### Typical Applications

<b>Piracy/Smuggling</b> 	<b>Fishing Monitoring</b> 	<b>Environment/ Pollution/Emissions</b> 	<b>Ship Risk Ranking</b> 
<b>Fleet Management</b> 	<b>Port Management</b> 	<b>Search and Rescue</b> 	<b>Infrastructure Protection</b> 

### Services Currently Available

<b>Ocean Finder</b>  Automatically detect ships based on images, fused with AIS information.		<b>AIS Abnormal Behaviour</b>  Trigger alert for illegal/ abnormal behaviour detected from AIS reporting.
