Cat Response Solution

When speed matters,
trust us for the answers

Insurance

Our cloud-based insurance solution brings together aerial imagery and geospatial data to deliver the fastest, most comprehensive collection of pre- and post-disaster imagery on the market.

Enable your claims adjusters to easily review data and use our tools to quickly gain the situational awareness needed to settle claims on-the-go or from the desktop accurately and efficiently.

The fastest imagery on the market available in as little as six hours.

Access to our global repository of historical imagery for before/during/after comparison.

Customizable, wide area image acquisition options.

In-app tools for making decisions and taking action.

AIRBUS

Why Airbus for your CAT Response Processes?

- Pay claims accurately and quickly from anywhere.
- Build field adjuster deployment needs; how many, where and how.
- Improve customer satisfaction by settling total losses faster.
- Quickly gain visibility into policy exposure data and bring into legacy systems.

Deliver the Best Customer Service

With first access to imagery of affected areas, our work with a Top 10 insurer enabled the claims teams to process thousands of claims accurately and efficiently, without needing to send adjusters on-site.

All Your Imaging Needs In One Place

Our constellation of Airbus-owned satellites and trusted network of flyover and drone image acquisition options ensures you quickly get the images you need to coordinate your CAT response planning.

Satellite: Good for wide areas, fastest to access – 1.5 m resolution globally, 50 cm resolution in cities.

Flyover: Higher resolution for wide areas – 7.5–15 cm resolution.

Drone: Highest resolution for assessing individual properties – Sub-5 cm resolution.

Airbus Data Portal: Customized for Your Needs

Our imaging options integrate securely with your data to drive context for better decisions.

Policy-Imported Data

- **Policies in force:** Simple, secure import of your policies' property locations and data.
- **Areas of interest:** Identify wide areas for quicker Policies in Force analysis.

Analytics & Data Fusion

- **Parcel property data:** Property attributes pulled in real time from Pitney Bowes.
- **Burn area analytics:** Identifies burned areas and total losses.
- **Flood models:** Flood water analytics identify areas of change in water areas and in other land features.
- **Adjuster toolkit:** Built-in tool to enable adjusters to navigate to properties, view before/after imagery and related analytics to make a decision.
